

Patented and third party tested, this superior odor, bacteria and UV protection is derived from an essential natural and safe element, **Zinc Oxide**.

### Anti Bacterial

Using JIS, ISO and ATM standard testing, materials embedded with patented particles of ecoZinc inhibit the growth of bacteria, fungi, mold and mildew.

### Backed by Published Science

Extensively patented and backed by numerous published studies proving the efficacy of ecoZinc.

## Key Benefits

### UV Protection

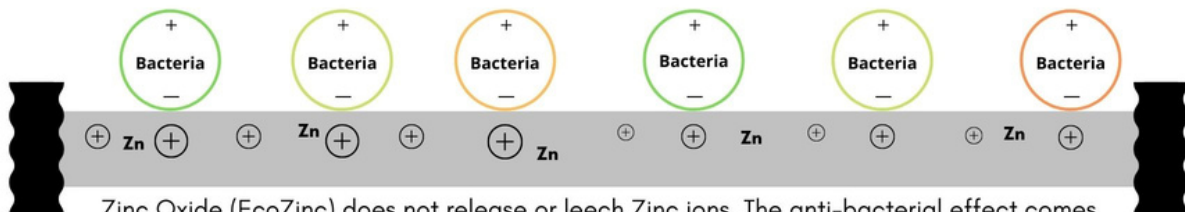

UV protection helps prevent materials from degrading by full spectrum UVA and UVB protection, which keeps products pristine and long lasting.

### GRAS Certified

Zinc Oxide is Generally Regarded as Safe (GRAS) by FDA standards, which makes the product usable for a wide array of industries where powerful protection is needed.

## HOW IT WORKS

Zinc Oxide (EcoZinc) does not release or leech Zinc ions. The anti-bacterial effect comes from its electric charge disrupting the cell membrane of bacteria so it can no longer grow.

Low Impact Textiles develops the most advanced textiles on the market today.

Our pride stems from helping companies bring to market powerfully enhanced products.

We believe sustainability is a key part of the entire product development lifecycle. All of our technologies are available in various sustainable forms. We hold multiple patents and registered trademarks protecting our creations.
